Hi, Erin-

Ok. Got it! Thank you!

I'll use the version with the added #5.

Best,

Michelle-

Subject: RE: Pohatcong OU3 RAWP Addendum No. 1 Comments / Informational Requests

Michelle,

I added #5 after talking to Patrick Nejand. If Summit Drilling, a NJ licensed driller, is overseeing the other drillers onsite who are not licensed in NJ, the administrative code requires direct, onsite supervision of non-licensed drillers.

Comments/Informational Requests:

1. Please confirm estimated submittal date for RAWP Addendum No. 2 and that the proposed date for beginning of drilling, 11/18, has not changed.
2. Please plan to incorporate a VMP into TMP-14
3. As part of Addendum #2 and subject to securing access during a planned shutdown, please identify preliminary soil verification boring locations in Groups A and B.
4. Assuming USEPA approval of RAWP Addendum #1, please confirm proposed date and time for the kickoff meeting. During this meeting, can a demonstration of the DeviFlex™ survey tool and additional information about the copper-nickel-nichrome heater and installation procedure be provided?
5. Please ensure all drillers onsite are in compliance with:

New Jersey Administrative Code, Section 7:9D-1.6 General provisions

(a) No person shall drill, construct, install, repair, replace, modify, stimulate or decommission any well or engage in such business without possessing a valid New Jersey well driller's license of the proper class unless that activity is performed under the direct and immediate on-site supervision of a New Jersey licensed well driller of the proper class issued by the Department.

Subject: Pohatcong OU3 RAWP Addendum No. 1 Comments / Informational Requests

Michelle,

The four items below represent the minor comments / informational requests based on RAWP Addendum No. 1 review and to support oversight planning. We are working through a staffing oversight schedule now. I included the bullets below in a separate Word document if easier to transmit to Ramboll / Rio Tinto.

Comments/Informational Requests:

1. Please confirm estimated submittal date for RAWP Addendum No. 2 and that the proposed date for beginning of drilling, 11/18, has not changed.
2. Please plan to incorporate a VMP into TMP-14
3. As part of Addendum #2 and subject to securing access during a planned shutdown, please identify preliminary soil verification boring locations in Groups A and B.
4. Assuming USEPA approval of RAWP Addendum #1, please confirm proposed date and time for the kickoff meeting. During this meeting, can a demonstration of the DeviFlex™ survey tool and additional information about the copper-nickel-nichrome heater and installation procedure be provided?

Thanks,

Erin Hauber, P.E.
